

Safety First

PEDRAIL[™] is a strong steel rail system that forms an effective barrier between pedestrians and vehicular traffic. Used to create curb extensions/intersection bump-outs, refuge islands and center medians, it functions as a movable curb: highly protective, but it's a quick-build solution and 100% changeable and reusable.

Modular & Rapidly Deployable

A modular system, PEDRAIL is easy to assemble, expand, contract or reshape. Rails connect and swivel at posts to create the desired barrier configuration. Posts have a narrow footprint to accommodate minimal buffer zones, and can be anchored into asphalt or concrete. Vertical flex delineators can be attached to any post. Rails sit 2" above grade to allow for storm water drainage and debris clearance. Choose galvanized or a powder coat color (over galvanized) finish.

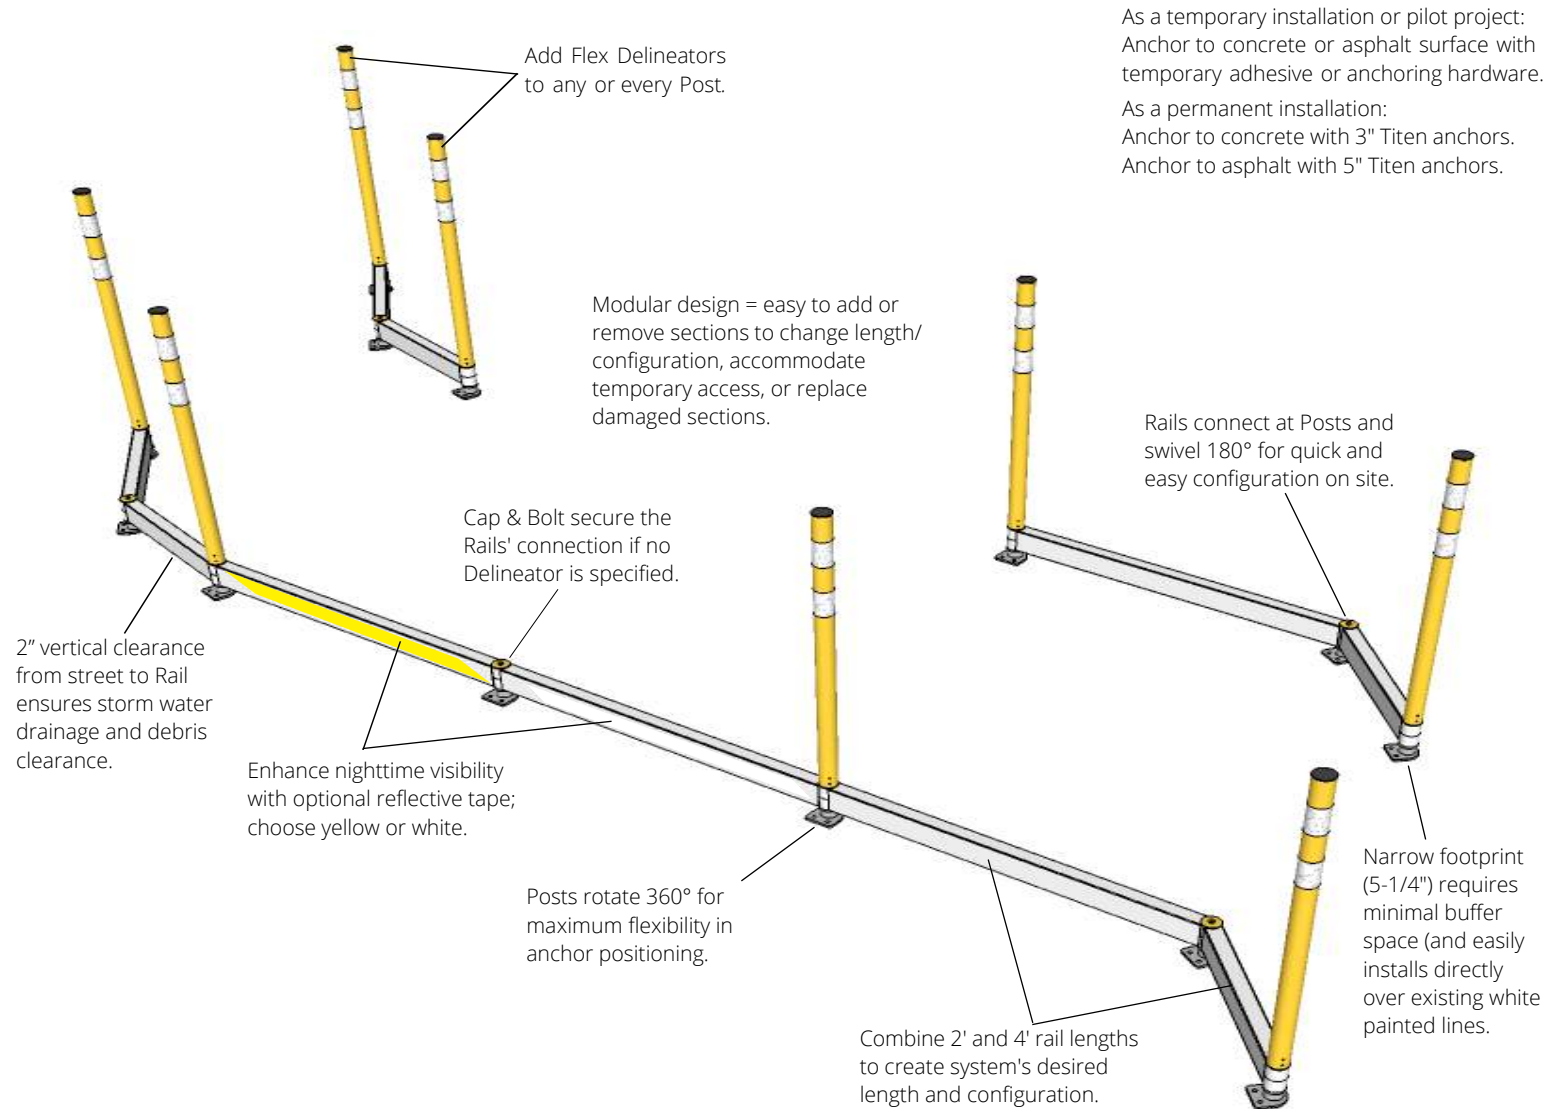

Permanent or Temporary

When anchored, PEDRAIL forms a strong, secure and permanent barrier. If it must be reconfigured or relocated, simply remove the anchors in seconds to move and repurpose the entire system. Ideal for new or retrofit construction as it does not impact planned or existing utilities.

PEDRAIL[™] at a Glance

- Curb extensions, center medians, refuge islands
- Strong, modular, adjustable system
- Steel rails: 2" w x 4" h
2' and 4' lengths
- Rapidly deployable: easy install/uninstall
- Permanent or temporary installation
- New or retrofit construction
- 5-1/4" footprint
- 6" overall height
- 2" clearance above grade
- Add Flex Delineators to any Post
- Galvanized or powder coat color finish

Rapid assembly and deployment during new or retrofit construction.
