

Improve Visibility & Aesthetics

While protective qualities are the priority, we believe that bike and pedestrian safety infrastructure can be both protective and aesthetically pleasing.

RAILRIBBON™ is a vertical element designed to enhance both the visibility and aesthetics of the **BIKERAIL®** and **CURBRAIL®** Systems. **RAILRIBBON** aids in traffic calming by ensuring that motorists clearly see the protective Rail systems. As an appealing alternative to flex delineators, it also significantly improves the overall appearance of physical infrastructure in public spaces.

Durable Material, Easy Installation

Made of resilient polymer, **RAILRIBBON** withstands extreme temperatures and long-term wear and tear. It can be added to new or existing **BIKERAIL** or **CURBRAIL** systems in minutes. Use in conjunction with our flex delineators for maximum system visibility, or without delineators for a more decorative appearance.

Shapes + Sizes = Design Choice

Create appealing corridors and intersections with a choice of white **RAILRIBBON** shapes and sizes. Choose from Arc, Sphere and Bulb shapes - each available in two heights and in single or double configurations. Combine **RAILRIBBON** elements quickly and easily to create decorative, custom, *protective* **BIKERAIL** and **CURBRAIL** systems.

RAILRIBBON™ at a Glance

- Optional vertical accessory
- Add to **BIKERAIL®** and **CURBRAIL®** systems
- Enhances visibility and aesthetics
- Durable polymer material
- Quick, easy assembly
- Add to new or existing installations
- Use with or without flex delineators
- Multiple shapes and sizes: Arcs, Spheres, Bulbs
- Create custom, decorative systems
- Color: white
